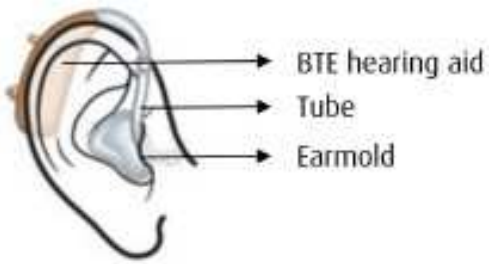
Earmold for BTE devices

microson

Description

Microson earmold to be connected to any manufacturer and model of BTE hearing aid



Intended Use

The earmold is a custom-made device that is fitted into the natural opening of the patient's ear canal. When used in conjunction with a hearing aid, the device compensates for hearing loss. MICROSON earmolds it from scratch, adapting it to the specific characteristics of the patient's ear canal. It is a reusable device; it does not require fitting. It is designed for adults and children.

The device is not intended for people with intellectual disabilities, due to the high risk of incorrect use. It is a non-mass-produced device, manufactured to the prescription of a qualified healthcare professional, and is intended for use only by a specific patient for the exclusive purpose of satisfying their condition and needs.
